

Front-end Web Developer position at Cape (Cape Town)

Are you a problem solver, quick study, and hooked on web development?

Cape is a rapidly growing SaaS and hardware company based in San Francisco and Cape Town on a mission to make the Internet better. We're building the simplest WiFi monitoring product ever. Our beautiful, easy to use product is helping experts and non-experts alike monitor and improve their networks, and we're backed by some great Silicon Valley investors.

We're looking for passionate developers who care about design, performance, and outstanding user experiences, who are eager to work in a fast-paced, flexible, and collaborative environment.

About you

Qualities:

- Desire to achieve perfection, but ready to compromise when necessary to ship on time
- Thrives on fresh challenges and continual learning
- Creative thinker and self-starter

Skills:

- Mastery of JavaScript
- Mastery of HTML and CSS
- Good knowledge of current web frameworks and libraries
- Understanding & experience with data flow in front-end & back-end technologies
- Familiarity with and adherence to web standards

Bonus:

- Experience with React (or other front-end SPA frameworks/libraries/concepts)
- Strong sense of interaction and visual design
- Familiarity with CSS pre-processors (SASS, LESS)
- Experience in developing apps on iOS, Android, or hybrid
- Experience with build tools (Webpack, Grunt, Gulp)
- Knowledge of dev ops and deployment tools
- Good understanding of git or other version control software
- Proficiency with the command line

What you will be doing

Working with a small, excellent team of sharp, motivated developers building outstanding web apps to be proud of. Using technologies like React, Redux, Webpack, Babel, Firebase, D3, React Native and many more.

What we are offering

- Full-time position
- Competitive salary (in USD or ZAR, depending on preference)
- Equity and great benefits
- Exposure to latest & greatest technologies
- Opportunity to help shape the company
- Growth and global scope
