

Front-end Engineer at Aruba Cape Town

Junior: 2 years' experience

About the Company

Aruba, a Hewlett Packard Enterprise company and global leader in networking products and services, acquired local startup Cape Networks in 2018. As Cape Networks we had a big vision: to improve the way the Internet works for everyone. We built a small team of skilled engineers and designers in Cape Town and a product that won us Best Startup of the year from Wi-Fi NOW.

Today, our product is the fastest growing in the Aruba portfolio and our Cape Town-based team is recognized as being at the leading edge of design thinking and execution.

What do we do?

Our product gives IT managers insight into how their users are experiencing Wi-Fi, network, and application performance, and helps them fix problems before users complain. Other performance tools are complex and intimidating, built by network engineers for network engineers; ours is beautiful and simple, and our customers love it. Our sensor hardware is a delight to install and our software is easy and fun to use. Our product is used in offices, universities, banks, hotels, airports, stadiums, retail stores, and more – every business with Wi-Fi is a potential customer that we can help.

We design all our own hardware and software in Cape Town. Our software systems are built entirely in-house using Python, React, InfluxDB, and AWS Kinesis and other technologies. We are truly a full stack company, with a great set of technical challenges to work on.

About You

Are you a problem solver, quick study, and hooked on web development? We're looking for passionate developers who care about design, performance, and creating outstanding user experiences, and who are eager to work in a fast-paced, flexible, and collaborative environment.

Skills

- Knowledge of JavaScript, HTML and CSS
- Good knowledge of current web frameworks and libraries
- Understanding & experience with data flow in frontend & backend systems
- Familiarity with and adherence to web standards

Qualities

- Desire to achieve perfection, but ready to compromise when necessary to ship on time
- Thrives on fresh challenges and continual learning
- Creative thinker and self-starter, for both features and debugging code

Bonuses

- Experience with React (or other frontend SPA frameworks/libraries/concepts)
- Strong sense of interaction and visual design
- Good understanding of git or other version control software
- A passion for testing and creating stable software
- Experience with Python

What you will be doing

You'll be working with a skilled team of bright, motivated developers building outstanding web apps to be proud of. You'll be using technologies like React, Redux, Typescript, SASS, Webpack and Babel to develop state of the art dashboards that will help IT teams at companies of all sizes monitor and troubleshoot their wireless networks and applications.

What we are offering

- Excitement and growth of a startup with the resources and security of a Fortune 100 company
- Full-time position
- Competitive salary
- Great benefits
- 6-month paternity/maternity leave (if you've been around for more than a year)
- Exposure to latest & greatest technologies
- Opportunity to help shape the product
- Growth and global scope
