IOS Developer at Aruba Cape Town
Intermediate to Expert: 4-6 year's to 6-10 years' experience

About the Company
Aruba, a Hewlett Packard Enterprise company and global leader in networking products and services, acquired local startup Cape Networks in 2018. As Cape Networks we had a big vision: to improve the way the Internet works for everyone. We built a small team of skilled engineers and designers in Cape Town and a product that won us Best Startup of the year from Wi-Fi NOW.

Today, our product is the fastest growing in the Aruba portfolio and our Cape Town-based team is recognized as being at the leading edge of design thinking and execution. Now is a unique opportunity to join our growing our team, build new products, and scale our systems to meet a >100x surge in demand during the next 12-18 months.

What do we do?
Our product gives IT managers insight into how their users are experiencing Wi-Fi, network, and application performance, and helps them fix problems before users complain. Other performance tools are complex and intimidating, built by network engineers for network engineers; ours is beautiful and simple, and our customers love it. Our sensor hardware is a delight to install and our software is easy and fun to use. Our product is used in offices, universities, banks, hotels, airports, stadiums, retail stores, and more - every business with Wi-Fi is a potential customer that we can help.

We design all our own hardware and software in Cape Town. Our software systems are built entirely in-house using Python, React, InfluxDB, and AWS Kinesis and other technologies. We are truly a full stack company, with a great set of technical challenges to work on.

About You
Are you a Swift or Objective_C guru? Do you know the intricacies of iOS inside and out? We are looking for a self-driven, highly motivated individual to head our mobile development team.

Skills
- Excellent knowledge and experience in developing for iOS
- Proficient with Swift (preferable) and Cocoa Touch
- Experience with offline storage and threading
- Familiar with RESTful APIs to connect to backend systems
- Experienced with source control systems (git/GitHub)
- Knowledge of low-level C-based libraries is preferred

Bonus
• Knowledge of networking or network performance testing will be a huge bonus
• Experience building developer tools

What you will be doing
To start with, you will be building our network performance assurance SDK to be used by third parties in their apps. This SDK will run network performance and other related tests and feed this data to our backend systems. You will also be developing the first consumer of this SDK in the form of an iOS app that will analyse Wi-Fi environments and display metrics to the user.

What we are offering
• Excitement and growth of a startup with the resources and security of a Fortune 100 company
• Full-time position
• Competitive salary
• Great benefits
• Exposure to the latest & greatest technologies
• Opportunity to help shape the product
• Growth and global scope
